Database Backup & Recovery Platform Modernizing Mission-Critical Data Protection with Kubernetes-Native Architecture

Client

A global IoT solutions provider managing massive smart city and industrial deployments across hybrid cloud environments. With a complex infrastructure consisting of MySQL, MongoDB, and Elasticsearch clusters deployed on Kubernetes, they needed a unified backup and recovery system that was fast, flexible, and compliant.

Platform Highlights & Tech Stack

Cloud-Native Architecture for Mission-Critical Data Protection

Platform Highlights

Kubernetes-Native Architecture

Containerized DB utilities
Horizontal

Unified Backup Utility

Full, incremental, and
PITR backups across
MySQL

Secure Web-Based GUI Dashboard

AngularJS and NodeJS,
backups in real-time

Modular Automation Triggers

Used Crontab for
schedules, LDAP for user-
role authentication

Tech Stack

Backup Tools

msql

XtraBackup

PBM Agent

SLM

SLM (Elasticsearch)

Orchestration & Data

Kubernetes via Rancher

MinIO (HA)

Secure File System

Messaging & Security

API

REST APIs

Crontab

SSL/TLS, IAM

Secrets Management

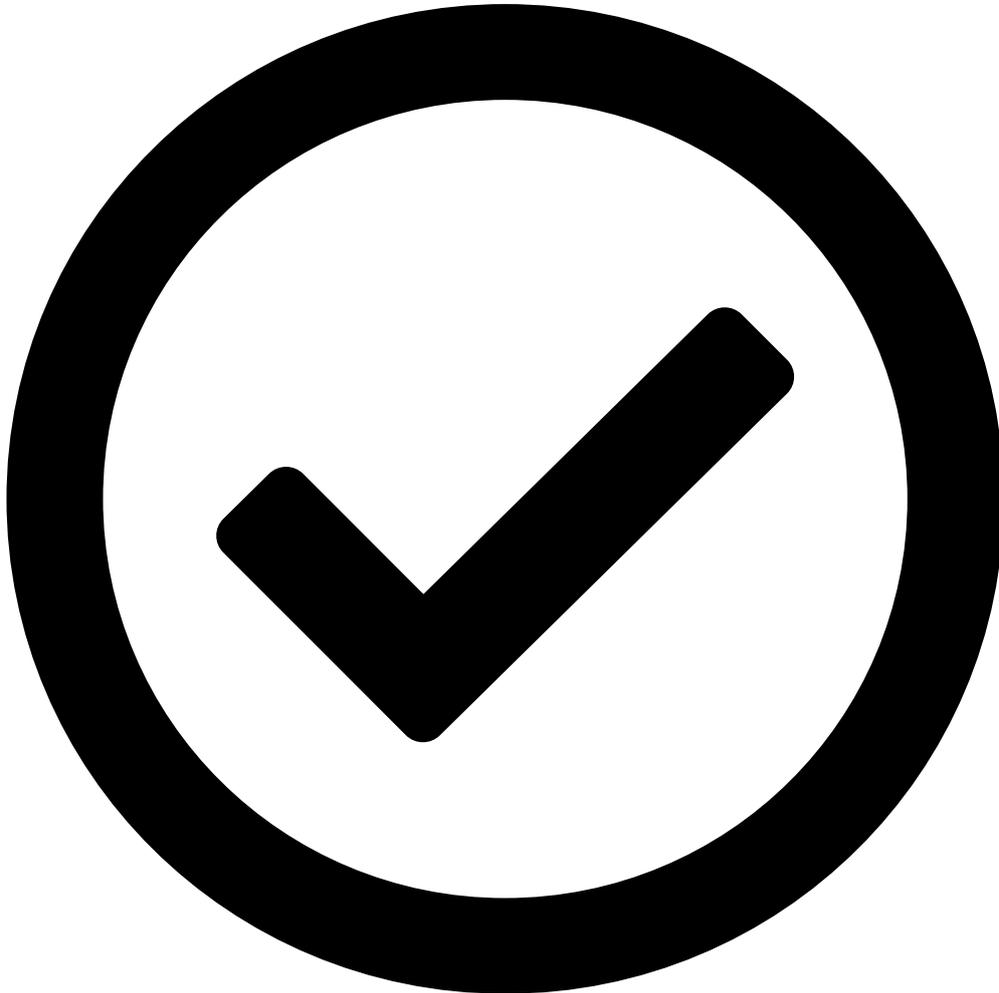

The Challenge

In a data-intensive ecosystem, backing up and restoring mission-critical systems is often fragmented, slow, and error-prone. The client faced:

- backup management across databases

No centralized

- times and manual failover interventions

High recovery

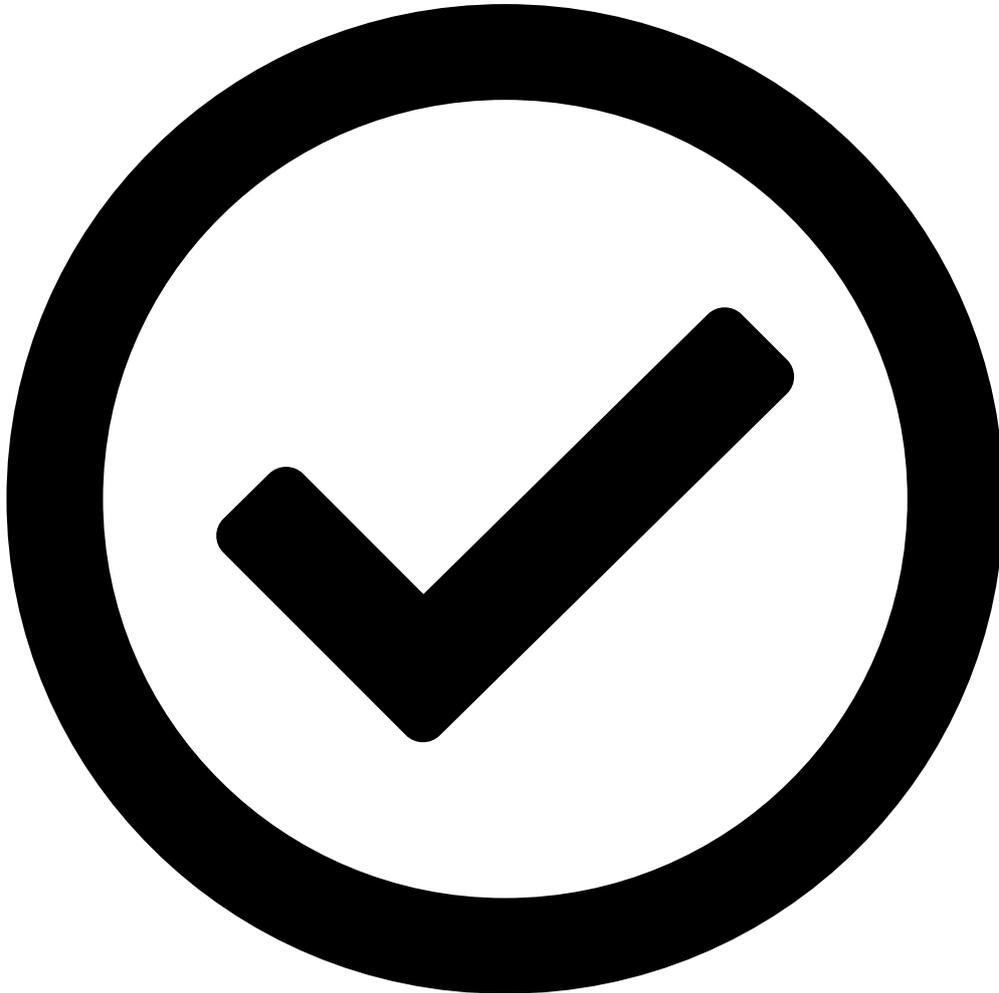

- risks due to lack of point-in-time restore (PITR)

Compliance

- handling access and encryption

Security gaps in

- tooling across Kubernetes workloads

Inconsistent

Our Strategy

We engineered a cloud-native backup platform designed specifically for Kubernetes and modern enterprise data stacks. It's modular, open-source-first, and highly automated and built for scale.

Platform Highlights:

- **Kubernetes-Native Architecture:** Containerized DB utilities deployed on Kubernetes with support for horizontal scaling and fault tolerance via Rancher.

- **Unified Backup Utility (DB Utility):** Handles full, incremental, and PITR backups across MySQL, MongoDB, and Elasticsearch.

- **Secure Web-Based GUI Dashboard:** Built using AngularJS and NodeJS, allowing users to trigger, schedule, and monitor backups in real-time.

- **Automation Triggers:** Used Crontab for scheduled backups and LDAP for user-role authentication. **Modular**

- **Cloud Storage**
Integration: Backups stored via MinIO (S3-compatible) with encryption and redundancy.

Tech Stack:

- XtraBackup (MySQL), PBM Agent (MongoDB), SLM (Elasticsearch)

Backup Tools:

- **Triggering:** REST APIs, Crontab

Messaging &

- MinIO (HA), Secure File System

Data Layer:

-

& Platform: Kubernetes via Rancher (Multi-master, Multi-node)

Orchestration

- NodeJS (Non-HA mode), LDAPS authentication

UI: Angular +

- SSL/TLS, Secrets Management

Security: IAM,

Impact & Results

Metric	Before TechTez	After TechTez Implementation
Backup Time	~3 hours (manual)	<30 minutes (automated)
Recovery Time	~6 hours	<1 hour (with PITR)
Admin Overhead	High (script-based)	80% reduction (central dashboard)
Data Loss	Frequent critical cases	Zero critical loss post-deployment
Total Cost (TCO)	High (proprietary tools)	40% reduction (open-source stack)

Why It Matters

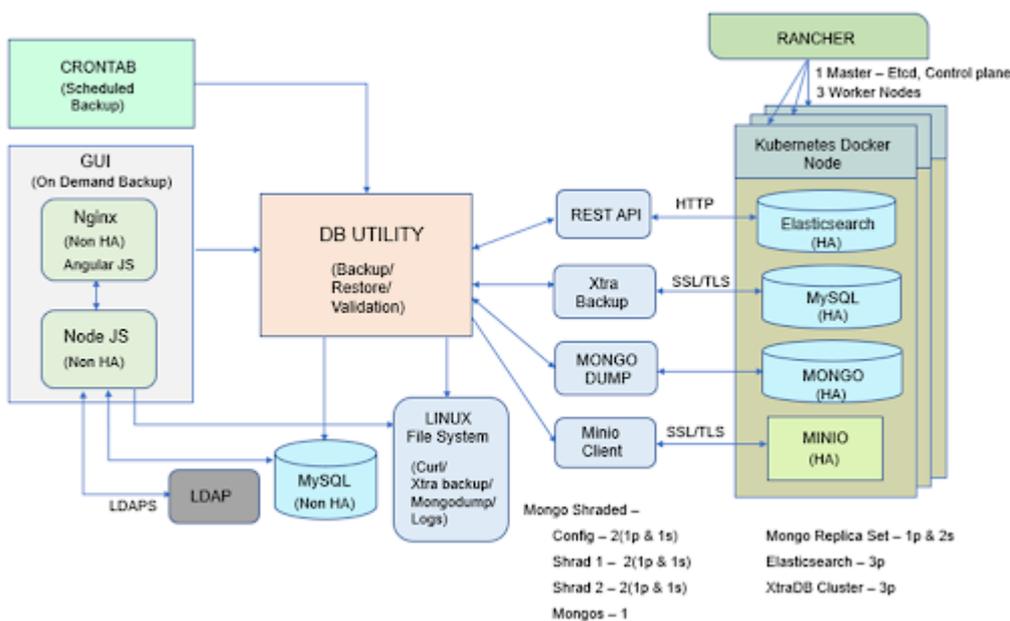

With TechTez, the client moved from a fragmented and fragile backup strategy to a scalable, resilient, and Kubernetes-ready data protection platform. We didn't just automate the backups, we redefined reliability.

Built for compliance ,Designed for observability,Delivered with precision

Your Data with TechTez

Let's reimagine your backup strategy and make it secure, fast, and built to scale.

Legacy UI Modernization – Digital Transformation

A legacy UI modernization initiative that transformed an IE-dependent, proprietary GUI into a secure, scalable, multi-browser Angular application using reusable components, REST APIs, and modern authentication enabling faster customization, lower maintenance effort, and future-ready digital operations.

TechTez

Legacy UI Modernization

From Internet Explorer-dependent GUI to a modern, secure Angular platform

Modular Components
